Nguyễn Trung Công Dưỡng (John Nguyen)

Intern Golang

Date of birth 17/08/2004

Giới tính: Nam

Số điện thoại: 0373911708

Email: congduongnguyentrung@gmail.com

Website: Facebook: Cong Duong Nguyen Trung

Github https://github.com/nguyentrungcongduong

Địa chỉ: TP.HCM/VN

CAREER OBJECTIVE

Currently, I don't have much practical experience with Golang, but I have a good foundation in installing plugins and single-source systems. I'm mastering Golang automation through small projects and official documentation, and I'm eager to participate in an internship to learn how to apply Golang in a real-world environment. I'm proactive, a quick learner, and ready to embrace technology.

PROJECTS

3/2025 - nay

Website Social media

react, tailwindcss, nodejs, inngest,clerk,...

Description:

Build a mini social-network application that allows users to register accounts, create posts, like (heart) posts, comment, and follow other users. The interface is modern, optimized for user experience, and supports real-time content updates.

Main features:

- Register / log in with email or Google
- Create, edit, and delete posts (with images)
- Comment, like (heart), and follow other users
- Personal profile page displaying user information and their posts
- Responsive UI for both desktop and mobile
- Real-time content updates support
-

Achieved Results:

- Successfully deployed a stable demo version on Vercel: https://build-and-deploy-a-full-stack-socia-three.vercel.app/

6/1/2025 - nay

Job Application Tracker Pro - CV MANAGER

Backend: Spring Boot 3.4.1, Java 17, Spring Security, JPA/Hibernate, PostgreSQL
Frontend: React 19, TypeScript, Vite, Zustand
Other: Docker, JWT authentication, async processing, RESTful API, deploy EC2

Description:

Developed a full-stack job application management system helping job seekers organize applications, track interviews, and optimize job search strategy with AI-powered resume analysis, automated notifications, and data-driven insights.

Main Features:

- User authentication with JWT and email verification (Spring Security 6)
- Application pipeline management with Kanban board and table view
- Interview tracking with automated follow-up reminders
- AI-powered CV-JD matching, ATS optimization, and skills gap analysis
- Automated email notifications for interview reminders (Gmail SMTP)
- Analytics dashboard with conversion funnel and offer probability prediction
- Real-time in-app notifications and scheduled background jobs
- Responsive dark-mode UI with glassmorphism effects

4/2025 - nay

Template Ecommerce Nextjs

Nextjs,bootrap

Description:

- Converted pre-built HTML/CSS templates into Next.js for future use.
- Applied technologies such as Clerk for authentication.

Achieved Results:

- Successfully deployed a stable demo version on Vercel: https://nextjs-first-seven-pied.vercel.app/

Link GitHub: https://github.com/nguyentrungcongduong/nextjs_first.git

2024 - nay

Multiple-Choice Exam Website

html, css, spring boot,jquery,thymeleaf

Description:

Developed an online multiple-choice testing website that allows users to log in, select exams, take tests, and view their results immediately after submission. The system saves scores, displays rankings, and includes an admin panel for adding new questions.

Main Features:

- User login / registration (Firebase Authentication)
- Display exam lists by topic
- Real-time timed quizzes with countdown
- Automatic scoring after submission
- Result display, score statistics, and ranking board
- Admin can add / edit / delete questions
- Responsive design for both mobile and desktop
